MAINTENANCE

- Regular dusting with a dry cloth will keep your table clean. However, to remove stubborn stains, wipe over with a damp cloth and washing up liquid.
- Recommended to avoid using waxes, oily soaps and impregnating products with chemicals for cleaning.
- Instead, it is recommended to use neutral detergents.
- We would like to point out that surfaces of products with very light or very dark solid colors are relatively delicate to certain types of stains as they can leave more visible traces compared to products with intermediate colors.
- Therefore, please bear in mind that these stains require more accurate and timely maintenance for complete and correct cleaning.
- Ordinary maintenance should be carried out with specific products suitable for removing marks or stains.
- For all colors and especially white colors, the first cleaning after installation is extremely important in order to remove all the residues of grout or adhesives that make the product dirty.
- In general, improper or late cleaning of these products may cause serious problems, making it difficult to remove dirt during the subsequent cleaning phase.
